Other input/output combinations are available (i.e. 3.3 VDC). Contact the factory for details at: sales@micropowerdirect.com

Notes:

- Output load regulation is specified for a load change of 10% to 100%.
- These units should not be operated with a load under 10% of full load. Operation at no-load may cause damage to the unit.
- These converters will operate without external components. However, when measuring output ripple, it is recommended that an external ceramic capacitor be placed from the +Vout pin to the -Vout pin. An input capacitor will enhance stability over temperature and input line variations. Recommended capacitor values are given in the table above. For applications requiring very low output noise levels, a simple LC filter should be effective.
- After an output short circuit, the input power must be recycled to operate the unit.
- Given for frequency range of 5 to 500 Hz and PSD of 0.0248 g²/Hz. Tested on X, Y & Z axis for 60 minutes.
- All models are fully approved to EN 60950 except 3.3 VDC input or output units.
- It is recommended that a fuse be used on the input of a power supply for protection. See the Model Selection table above for the correct rating.

Vin	Input Capacitor	Vout	Output Capacitor
3.3 VDC	4.7 μF	3.3 VDC	10.0 μF
5 VDC	4.7 μF	5 VDC	10.0 μF
12 VDC	2.2 μF	9 VDC	4.7 μF
24 VDC	1.0 μF	12 VDC	2.2 μF
